

I CLAIM:

1. A material for filling a cavity in the body which has a very high viscosity when in the cavity and a lower viscosity when being delivered.
2. The material of claim 1 comprising a highly pseudo-plastic filler.
3. The material of claim 1 comprising a Bingham plastic filler.
4. A method of filling a cavity in a body comprising delivering a material of claim 1, 2 or 3 to the cavity at a lower viscosity and retaining the material in the cavity at a high viscosity.
